

✓ WHY REED?

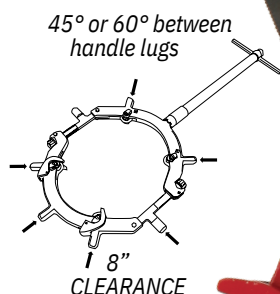

Rotary Cutters are a REED invention! REED Rotary cutters cut pipe safely, easily, quickly, and at a low cost. Provides a square cut and can be used anywhere – in the ditch, under-water, in explosive atmospheres (cold cut), in noise-free zones, over head, in racks of pipes, etc. REED Rotary cutters last for decades.

REED

Rotary Cutters & Low Clearance Rotary Cutters

Handle Extension
Affixes to main handle for additional leverage. Included with RC20/RC24 models.

RC20 Rotary Cutter

Cold cut large diameter steel, most stainless steel, ductile, and cast iron pipe in close quarters. The low profile design of the LCRC models needs only 4" clearance for up to 16" pipe diameter; only 8" clearance for the **RC20** and **RC24**; and just 11.8" clearance for the **RC30** and **RC36** large diameter pipe cutters. Each cutter is supplied with a slip-on handle that is used to turn the cutter around the pipe in one direction. The handle is also used to tighten the cutter every 1/2 revolution.

Best manual cutters for ductile iron. With good leverage from long handle, pipe snaps off squarely before wheel penetrates halfway through pipe. Cutters have heavy-duty frames.

All sizes use the same cutter wheels: either RCS8-36 for steel and RC18-30 for ductile and cast iron. RCX wheels cut up to 25/32" wall thickness for steel pipe.

ROTARY CUTTERS

Catalog No.	Item Code	Length/Width/Thickness			Clearance		Length		Weight	
		Steel in.-nom.	Cast & Ductile Iron in.-nom.	actual O.D. mm	in	mm	in	mm	lbs	kg

S Models for steel/stainless steel

I Models for cast and ductile iron

X Models equipped with RCX cutter wheels and special RC8-30XR outboard rollers. Larger blade exposure (0.800" / 20.3 mm) of RCX cutter wheels penetrates thick pipe walls of steel, heavy wall steel and stainless steel.

Wheels for same size cutters are interchangeable. Recommend only REED cutter wheels be used.

*Model ships freight.
